PROTECTING PEOPLE

Safety Eyewear

Innovative in both design and functionality

Manufacturing and technology

uvex industrial health and safety – the systems provider with world class manufacturing expertise

80 % of our entire net output is produced in our own manufacturing plants, where we combine the very latest technology with the power of innovation and years of experience. Our quality management systems meet the very highest requirements and all plants are certified in accordance with the ISO 9001:2000 quality management standard.

At its main location in the Bavarian city of Fuerth, the uvex safety group has brought together its expertise in safety eyewear, wide-vision goggles, prescription safety spectacles and laser protection goggles to create a unique centre of expertise for protective eyewear.

cal expertise

The uvex product development team works to put ideas into practice and bring projects to life. All uvex products exceed the requirements of the relevant standards. The mechanical and optical properties of our products are subject to continuous testing in our laboratory and our unique, high performance coating systems are developed and produced in-house.

The uvex safety group's quality standards are exemplary a key part of which is our environmental mission statement, which is binding at all our sites, and forms a core part of company policy.

uvex racer CT carbon and uvex

Carbon is one of the most versatile, innovative and high-performance materials currently available. By using numerous carbon technologies, uvex has successfully created a wide range of high-performance products – the carbon product range.

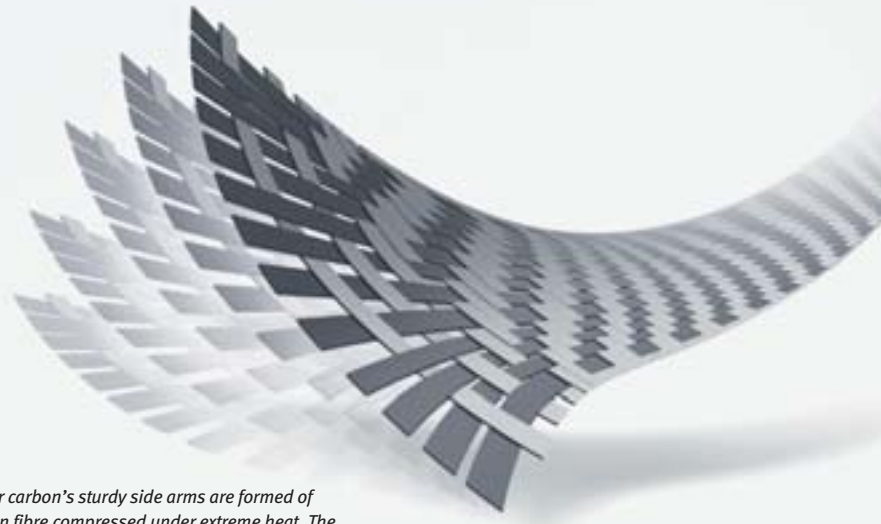

Carbon is relatively light yet highly resilient, making this high-tech material especially suited for use in the development of safety eyewear. The lightweight nature and sporty design of uvex carbon safety eyewear guarantees outstanding wearer comfort and acceptance.

uvex racer CT carbon – maximum resilience, minimal weight

The uvex CT racer carbon's newly developed ventilated side pieces ensure continuous air circulation.

The uvex CT racer carbon's sturdy side arms are formed of 5 layers of carbon fibre compressed under extreme heat. The arms are then milled, ground and polished so that every pair of uvex CT racer carbon goggles is an individually crafted masterpiece.

uvex carbonvision – the world's lightest wide-vision goggles

Convenient clip to remove headband before cleaning

High-quality, long-lasting headband

Robust frame with flexible soft components

Outstanding seal and splashproof protection

Flexible soft components adapt perfectly to your face shape and ensure a perfect fit.

Protective eyewear

The uvex safety group is the only manufacturer in the international personal protective equipment (PPE) sector that has researched climate issues within occupational safety products, resulting in uvex climazone. A comprehensive climate concept for all areas of activity and work environments.

uvex super g – the lightest safety glasses in the world

Through the new high-tech coating supravision NC, the spectacles stay mist-free nearly twice as long as prescribed in the European Standard EN 166.

The unique frame concept replaces the traditional fixing of the temple arms by a fatigue-proof, highly flexible mono-frame and furthermore has an innovative temple arm design with patented x-stream technology (XST) which provides pressure-free, comfortable wearing and extreme non-slip quality.

Breathing protection

uvex silv-Air climazone – with three-chamber system for increased comfort

The result: increased well-being, longer lasting productivity and optimal comfort in every situation!

Safety eyewear

Technology

The rapid rate of progress in trade and industry presents us with the ongoing challenge of finding new solutions that successfully combine safety, functionality, quality and design. This is why we start each day by asking ourselves the all-important question: "What do people expect from modern safety eyewear?"

The answer is maximum protection and optimal comfort, packaged together with stylish design! – certainly the best way of persuading people to wear safety eyewear over long periods. Eyewear must be capable of adapting to individual head shapes while ensuring a pressure-free fit and providing total eye protection. This applies as much to spectacles as it does to goggles. As to the question about the nature of modern safety eyewear, we have come up with a variety of answers which we update continuously. Why? because our number one priority is the safety and comfort of people at work.

duo component technology

The intelligent combination of materials selected by uvex joins two different components to create a unified whole. The soft, flexible component adapts to the individual contours of the face, preventing pressure points from developing on the forehead, nose and cheeks, and forming a tight seal without gaps. The hard, robust component guarantees extraordinary stability and optimal protection.

x-stream-technology

uvex's very own x-stream-technology provides a smooth transition from the hard to the soft plastic. The body is partially covered with soft, easy-grip components. The non-slip surface guarantees flexibility and a comfortable fit.

Individualisation – custom design for your company

If you require glasses with an individual touch, we have the solution – your safety equipment can be customised to match your company's corporate design.

Clear

Clear lenses provide high mechanical protection and absorb 100 % of UV rays. Complies with norms EN 166 + EN 170.

Amber

The lenses provide high mechanical protection and absorb 100 % of UV rays. The subtle yellow tint specifically filters out the blue light in the visible colour spectrum, providing greater contrast. Complies with norms EN 166 + EN 170.

Amber light

The lenses provide high mechanical protection and absorb 100 % of UV rays. A lot of people find the subtle yellow tint has a pleasant effect on the human eye. Filters provide greater contrast, especially within the short-wave spectrum. Complies with norms EN 166 + EN 170.

Grey

The lenses provide high mechanical protection and absorb 100 % of UV rays. Filtering parts of the visible spectrum provides glare protection, the grey lenses are sun glare filters that do not restrict the ability to recognise striking colours. Complies with norms EN 166 + EN 172.

Brown

The lenses provide high mechanical protection and absorb 100 % of UV rays. They filter parts of the visible spectrum, in particular blue light and infra-red light, providing both glare protection and increased general protection. The brown lenses are sun glare filters that do not restrict the ability to recognise striking colours. Complies with norms EN 166 + EN 172.

Orange

The lenses provide high mechanical protection and absorb 100 % of UV rays. Increased filtering within the visible short-wave light spectrum provides greater contrast. The warm shade of orange has a relaxing effect on the eyes, even when worn for extended periods.

UV green

The lenses provide high mechanical protection and absorb 100 % of UV rays. Filtering parts of the visible spectrum provides glare protection. Complies with norms EN 166 + EN 170.

Blue

The lenses provide high mechanical protection and absorb 100 % of UV rays. The subtle blue tint has a pleasant effect on the human eye. This tint is especially good at contributing to relaxed vision at workplaces which place great strain on the eyes, such as testing jobs (excl. colour checks). Complies with norms EN 166 + EN 170.

Welding filter green

As welding filters, these lenses filter out all rays resulting from gas welding processes, such as UV rays, IR rays and visible glare. Different protective levels are available depending on the area of application. Welding filters made from polycarbonate with our infrarad PLUS coating, provide higher levels of mechanical protection than welding filters made of glass or laminated glass. The risk of damage from welding sparks is also minimised. Complies with norms EN 166 + EN 169.

The following lens materials are used for uvex safety glasses:

PC = polycarbonate VG = laminated glass (clear) and laminated
 G = glass glass for welding filters
 CA = cellulose acetat HG = hardened glass

Safety eyewear

Technology

Adjustable side-arms

The inclination and length of the side pieces can be adjusted to provide perfect fit and comfort.

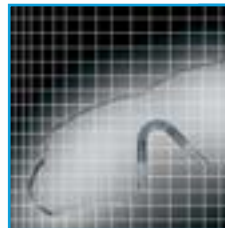

Maximum wearer comfort

A secure and pressure-free fit thanks to uvex quattrofex side pieces with four soft pads.

Fast lens replacement cuts costs

Quick and easy lens replacement makes the adjustment to different working conditions and light levels, easy.

The highest optical quality in accordance with EN 166

Freedom from distortion prevents the symptoms of fatigue. Ideal for constant use in work which place particularly high demands on the eyes.

Lightweight

Ultra light for permanent wearer comfort. So light that you can wear them all day long.

High Impact Protection

Extremely impact-resistant polycarbonate for maximum protection against all mechanical risks in line with EN 166.

advanced coating systems

Coating technology

Nothing is more important than people's safety at work. That's why uvex invests so heavily in the continuous research and development of its products and technologies. We can already see our efforts paying dividends in the form of three new intelligent coating systems, which work actively to provide a solution for every challenge. Yet more proof of uvex's innovative power and coating expertise.

Lenses coated with **uvex variomatic** darken within 10 seconds to provide the wearer with 100 % protection against UV radiation, and return to their original tint after 30 seconds – quicker reactions than any other coating. These lenses are especially suitable for workers who frequently alternate between inside and outside work or between light and dark environments.

uvex supravision extreme lenses prevent moisture from accumulating to ensure a permanent antifog effect, meaning the lenses cannot steam up. Glasses and goggles with uvex supravision extreme coating technology are especially suitable for environments with high air humidity and condensation.

The antifog effect of the new **uvex supravision performance** is three times stronger than legally required. This coating is perfect for sudden exposure to condensation and work environments which demand that lenses be frequently cleaned. The antifog effect is permanent.

Safety eyewear

Coating technology

Our unique **supravisión HC-AF** technology enables us to apply a coating which makes the lens extremely scratch-resistant on the outside and permanently antifog on the inside. It also provides 100 % UV protection.

Individual side-arm inclination

Adjustable side-arm inclination guarantees that uvex safety eyewear can adapt to fit any head shape, ensuring higher wearer acceptance.

Lenses coated with **supravisión NC** combine the advantages of optidur NC and optidur 4C PLUS. They are scratch-resistant and non-fogging on the inside, while the outside is extremely scratchproof, resistant to chemicals and very easy to clean thanks to nanotechnology, resulting in a top-class coating.

Individual length adjustment

As the shape of everyone's head is slightly different the fact that uvex safety glasses come with a range of length settings and adjustability, ensures a comfortable and correct fit for all.

Lenses coated with **optidur NC** are extremely scratch-resistant and are also highly resistant to chemicals. The lacquer system features nanotechnology, considerably increasing its non-stick properties. As a result, water-based and oily marks can be removed effortlessly.

uvex quattroflex

Four pads around the sensitive ear area ensure a comfortable, pressure-free fit.

optidur 4C PLUS combines 4 features in one lens for permanent antifog, scratchproof and antistatic properties plus 100 % UV protection.

uvex duo-flex

The unique, patented soft pads on the ear pieces snugly fit any head shape, preventing pressure points behind the ears and guaranteeing a secure fit.

infradur PLUS welding lenses protect against ultraviolet and infra-red radiation as well as glare. The coating minimises welding spark damage.

Suitable for use with prescription glasses

Overspecs and goggles in particular, must be able to provide a pressure-free fit when worn in conjunction with prescription spectacles. We meet this requirement by developing suitable designs and using high-quality materials.

ultradura is an inexpensive coating that gives lenses a good level of scratch resistance and completely absorbs harmful UV radiation.

uvex „**easy to clean**” glasses are also less susceptible to dirt.

uvex hi-res is the lens technology with an optimised wavefront: the latest development for safety eyewear with pin-sharp vision.

Safety Spectacles

uvex racer SP

- Low weight and robust industrial safety spectacles with a sporty design
- Optical Class 1 Polycarbonate lens with a wide field of vision
- High level of protection with the wrap around lens and integrated side protectors
- Maximum comfort is provided by the soft, flexible nosepiece.
- Perfect for all day wear

Wrap around lens with extensive side protection

- Unhindered vision enhances safety at work
- Wide field of vision
- High level of all-round protection

Soft, flexible nosepiece

uvex super g · 9172

This exciting eyewear concept unites innovative technologies and high-tech materials.

The lens
Using state-of-the-art manufacturing processes, an extremely thin lens with exceptional optical clarity can be created. The lenses have ideal aerodynamics and are angled forwards to provide excellent ventilation, keeping the eyes comfortable.

The frame
The frame is made of ultra light, high-tech polymers, guaranteeing maximum flexibility. The innovative side piece concept features uvex x-stream-technology for an excellent, non-slip fit and a wide range of applications.

The result
The super g is completely metal-free and provides top-level protection – and all that at only 18 g!

uvex gravity zero · 9191 with “Z” fold

Is it its lightness that makes the uvex gravity zero so unique? Or is it the innovative combination of materials, design and technology?

Many different factors make our new uvex gravity zero precisely what it is – truly state of the art, providing style, protection, fit and comfort in a product that is so light you can't see how little it weighs. You will just feel it, but only just.

The new uvex gravity zero has been tested under extreme conditions and is more than equipped to tackle the rough and tumble of the working world. Its revolutionary side piece technology makes it ideal for use in a wide variety of workplace environments and for a wide range of applications. With more head contact points than conventional spectacles, these spectacles also fit better, guaranteeing maximum comfort. Just as the wind appears to move things effortlessly and make them appear weightless, so too does the uvex gravity zero appear to be weightless, moulding to fit any head shape.

uvex racer CT

Extremely sporty. Perfectly ventilated. High protection level.

climazone

uvex racer CT carbon · uvex racer CT · 9210

uvex racer CT glasses are not your typical industrial safety glasses! They have been designed for industrial use and certified in accordance with the standards, but were also designed with the highest levels of comfort and style in mind. This innovative combination of new technologies makes them perfect both for a wide range of industrial applications as well as for sport and leisure activities.

uvex racer CT glasses are the latest addition to the uvex climazone range with the in-built guarantee of the highest level of comfort for the wearer.

The new uvex racer CT carbon is the first industrial safety spectacle to combine state-of-the-art carbon fibre material used in air and space travel with the stringent requirements of the manufacturing industry. The multilayered, laminated carbon fibre material makes the side arms extremely robust and resistant.

The combination of high strength carbon and soft side arms creates a perfect balance between protection and comfort. This uniquely stylish design, which gives the fabric structure of the carbon fibres a 3D appearance, should encourage a high level of wearer compliance.

uvex i-vo

uvex i-vo · 9160

uvex i-vo, the „eye-volution” in protective eyewear. When it comes to comfort and looks, i-vo does not compromise, making these spectacles incredibly popular among wearers. They are not only uncompromisingly safe but also excellent in terms of comfort and design. This is guaranteed because of uvex’s duo component technology, which ensures that the spectacles not only tough, but also smart. Soft components around the sensitive parts of the face (nose, forehead, ears) guarantee permanent maximum comfort.

Available with side pieces:
Four soft pads on the quattroflex side pieces reduce pressure around the sensitive ear area ensuring a comfortable fit.

Available with a headband:
A headband instead of the side pieces ensures a snug fit, even under difficult working conditions.

uvex super OTG

As visitors' glasses and for day-to-day use

With its ADVANCED OPTICS BY SCIENCE technology, uvex is exploring new avenues in the development of optical reproduction properties above and beyond the current standards. uvex super OTG boasts uvex's cutting-edge lens technology.

It also features hingeless side pieces made of extremely impact-resistant Grilamid® with soft ear pieces. It therefore combines the benefits of temple glasses with the comfort of a headband. The flexible side piece concept means the glasses can be adapted to different wearing scenarios, regardless of whether they are worn together with prescription glasses or not.

Stylish yet protective – the latest trend in safety eyewear

With an anatomically shaped wrap-around lens, the uvex x-trend is an expression of fashion today – after all, eyewear with large lenses conquered the world long ago. In addition to its stylish design, the uvex x-trend offers a high degree of safety with its large lens. It offers a clear view in all directions, 20 % more cover than normal temple glasses, UV protection up to 400 nm and if desired, the comfortable uvex side arms with x-stream-technology (XST). The uvex x-trend – stylish yet protective. Now there's no longer any need to hide behind your spectacles at work.

Optional:
uvex XST for extreme comfort that you can feel! Thanks to a smooth transition from hard to soft plastic.

- Smooth transition between materials
- High flexibility
- Non-slip surface

Safety Spectacles

uvex skyguard NT · uvex skylite

uvex skyguard NT · 9175

The uvex skyguard NT spectacles have been improved to provide all-round protection. Based on the existing uvex skylite spectacle we have added a conceptually simple, injection moulded TPU frame to significantly increase wearer protection levels, through minimising the risk of particle ingress. The flexible, closed-pore soft components of the frame enables a customised, individual fit and are easy to clean to promote long term use.

Optional: uvex side arms can be adjusted to four different lengths and finely angled, guaranteeing a comfortable, customised fit.

Safety Spectacles

uvex racer MT · uvex winner

uvex racer MT · 9153

The uvex racer MT: sporty metal sunglasses with a very low-profile metal frame, high flexibility and extremely low weight.

The innovative frame design means there's no need for spring hinges at the arm joints, and the glasses fit perfectly on all head sizes.

An adjustable nose piece makes them much more comfortable to wear than other metal frames.

The racer MT uses new design technology which eliminates the need for screws while enhancing their protective qualities. The result – superior styling – high comfort and uvex quality performance.

Advanced Optics by Science

Researching, developing and protecting.

Through "ADVANCED OPTICS BY SCIENCE", uvex has initiated an independent research project which focuses on optimal definition and mechanical protection effects. Our objective is to develop eyewear which provides perfect protection whilst at the same time facilitating perfect vision. The optical characteristics of the new lenses are similar to those of "air". This has led to the creation of a new class for protective eyewear with wavefront- optimised lens technology: uvex hi-res. Aberrations are reduced to a minimum and provide maximum vision quality. We have made "rapid scientific advances", part and parcel of our development and production processes.

The advantages are obvious:

- With wavefront-optimised protective eyewear, employees can work for longer periods of time without suffering the symptoms of fatigue.
- The ability to maintain concentration levels is enhanced
- The risk of accidents and errors is therefore reduced.

See for yourself what an impact our wavefront-optimised lens technology has on clear vision.

LASERVISION

Cutting edge technology for laser protection

LASERVISION – a member of the uvex group

Rapid developments in laser technology mean that laser protection is becoming ever more important in terms of personal safety. New laser applications in all areas of industry, research and medicine demand new and unique safety and protection solutions.

LASERVISION, a member of the uvex group is one of the leading global producers of laser protection products. It develops, manufactures and distributes laser protection glasses, large-scale laser protection (mobile screens and safety curtains), small filters and cabin windows for all laser types and applications. Laser safety eyewear with coated or absorbent special lenses and plastic are a key part of the product portfolio. LASERVISION has over 30 years of experience in this technology.

Sample eyewear

Product portfolio

- Laser safety eyewear based on all types of technology
- Coating on polycarbonate and glass filters
- Absorbent glass and polycarbonate filters
- Laser protection windows made from mineral glass
- Large-scale safety windows made from polycarbonate
- Laser safety curtains, vertical blinds and mobile screens
- Enclosures

CE-certified laser protection from LASERVISION

LASERVISION intends and aspires to offer the world's best certified laser protection. It's organic product and market focused research and development programme, complimented by close cooperation with leading glass, plastic and dye manufacturers, guarantees continuous product development opportunities.

All LASERVISION laser safety glasses are CE-certified and conform to either EN 207 or EN 208 norms at the very least. They guarantee not only the minimum required optical density, but also, in standard use, a minimum resistance time of 10 seconds (continuous wave lasers) or 100 pulses (pulsed lasers) for the wavelength for which they have been approved. In addition, the majority of our standard products even fulfil the stricter requirements of the GS standard.

Laser protection training and participation in European standards committees

LASERVISION, in cooperation with the uvex academy offers a programme of modular courses on laser safety. These feature compulsory annual laser safety training together with special courses for those responsible for laser safety, advanced customised seminars, an internship in laser safety and measuring techniques. LASERVISION is an active and knowledgeable partner for various National and International standards committees and takes part in domestic and International research projects in the field of laser safety in conjunction with research institutions.

Safety Goggles

uvex carbonvision

uvex carbonvision · 9307

The intelligent use of ultra modern materials and manufacturing technologies enables uvex to design frames which combine reduced size/volume and high mechanical resistance. uvex carbonvision provides the wearer with unparalleled comfort levels despite the very high level of mechanical stability. The TPU layer is permanently fixed to the frame, ensuring a perfect individual fit and it's easy to clean and maintain. The uvex carbonvision, weighing just 46 gr is undoubtedly one of the lightest wide-vision goggles on the market, enabling the wearer to work for longer periods without the distractions and problems caused by discomfort, thereby increasing his or her productivity.

The newly developed supravision extreme coating technology prevent the goggles from steaming up, even in the most demanding conditions (see page 18).

uvex carbonvision goggles are recommended for protection against dust, liquid splashes and mechanical hazards. The goggles are ideal for wearing with disposable respirators and bump caps.

Safety Goggles

uvex ultrasonic

uvex ultrasonic · 9302

Pioneering full vision goggle with exceptional wearer comfort. The combination of two different materials (hard/soft components) means that pressure never becomes a problem, even after long periods of wear. The soft flexible component adapts to individual face curvature, providing complete side protection even over prescription spectacles. The outstanding ventilation ensures a pleasant non-irritating interior environment. Further key features of this top goggle include sporty design, panorama field of vision and easy lens replacement.

Patented bellows design

- Highly flexible yet stable
- Adjusts to fit all face shapes perfectly
- Maximum wearer comfort
- Excellent shock absorption

Patented ventilation system

- Additional side ventilation via integrated air channels
- Extended lens provides better protection against splash

Changing lenses

- Lenses can be changed quickly and easily, cutting costs

All-round ventilation

- Incoming and outgoing air circulated better thanks to a new all-round ventilation system

Adjustable

- Can be adjusted quickly and easily, providing reliable all-round protection due to excellent fit

Wide field of vision and compatible with prescription glasses

- Wide vision in line with standard requirements
- Can be worn comfortably on top of prescription glasses

uvex · 9405

Large goggle with front ventilation system, ideal for people who wear prescription glasses. Comfortable fit thanks to soft face and nose padding. Upper part of body frosted to protect against light reflection. Easy headband adjustment. Suitable for use with half masks and filtering half masks.

uvex academy

Industrial protective eyewear

A practical introductory seminar on the use of PPE products for eye protection.

- The basic applications of PPE eyewear, including products that protect against mechanical dangers, chemicals and radiation (e. g. welding protection), and products designed for specialised applications
- Demonstration and assessment of the dangers posed by mechanical finishing, infrared and ultraviolet radiation (e. g. encountered during welding or in chemicals), illustrated by case studies
- Assessment of the risk of eye injury in the workplace
- Explanation of how these risks can be dealt with efficiently in each workplace
- Comprehensive overview of the requirements of industrial protective eyewear, standards, applications, risk assessment and how to care for protective eyewear
- Information on the classification of protection products based on their labelling and the areas of application of the various types of equipment

Target group

Those responsible for the work-related health and safety of employees within a company, e.g. health and safety officers and specialist purchasers.

For more information or to book a place, please visit www.uvex-academy.de, call +49 (0)911 9736 1710 or email academy@uvex.de

Labelling and norms

Levels of welding protection and recommendations for use according to EN 169

LEVEL OF PROTECTION	USE	GAS USED	FLOW RATE (L/H)
1,7	Protection against scattered rays for welding assistants	-	-
